MODULE 7: DATA WRANGLING WITH PANDAS

**Submitted by: Delloson, Angelo Dan Renz G.

Performed on: 10/7/2024

Submitted on: 7/ / 2024

Submitted to: Engr Roman M. Richard

7.1 SUPPLEMENTARY ACTIVITY

Using datasets provided, perform the following exercises:

EXERCISE 1

```
1 import pandas as pd
2 import numpy as np
3
4 aapl = pd.read_csv('/content/aapl.csv')
5 amzn = pd.read_csv('/content/amzn.csv')
6 fb = pd.read_csv('/content/fb.csv')
7 goog = pd.read_csv('/content/goog.csv')
8 nflx = pd.read_csv('/content/nflx.csv')
9
1 aapl['ticker'] = 'AAPL'
2 aapl
```

| | date | open | high | low | close | volume | ticker | |
|-----|------------|----------|----------|----------|----------|----------|--------|-----|
| 0 | 2018-01-02 | 166.9271 | 169.0264 | 166.0442 | 168.9872 | 25555934 | AAPL | ılı |

5    value_name = 'data'
6 )
7 melted_faang
```

EXERCISE 3

This is the source for the hospital information that i get:

https://sulit.ph/list-of-hospitals-in-metro-manila-with-contact-details-website-and-social-media-accounts/

So After searching for some website for the hospital list i did find a website for this type of exercise.

```
1 import requests
2 from bs4 import BeautifulSoup
3 import pandas as pd
 5 url = "https://en.wikipedia.org/wiki/List_of_hospitals_in_the_Philippines"
7 response = requests.get(url)
8 soup = BeautifulSoup(response.content, "html.parser")
10 tables = soup.find all("table")
11
12 df_list = []
13
14 for table in tables:
       headers = [header.get text(strip=True) for header in table.find all("th")]
15
16
17
       if "Name of Hospital" in headers and "Location" in headers:
18
           name index = headers.index("Name of Hospital")
19
           location index = headers.index("Location")
20
21
22
          data rows = []
23
          for row in table.find_all("tr")[1:]:
24
               columns = row.find all("td")
25
               if len(columns) >= len(headers):
26
                   name = columns[name_index].get_text(strip=True)
27
                   location = columns[location index].get text(strip=True)
28
29
                   data rows.append([name, location])
30
          df = pd.DataFrame(data rows, columns=["Name of Hospital", "Location"])
31
32
          df list.append(df)
33
34
35 hospitals_df = pd.concat(df_list, ignore_index=True)
36
37 hospitals df.to csv('/content/hospitals.csv', index=False)
38
39 hospitals_df
40
```
